SPEEDY basic

Function description SPEEDY basic – Positioning and clamping in one function

Releasing:

- The release pressure (1) is applied to the piston (2) and the piston moves up.
The springs (3) are compressed.
 - The balls (4) move to the parking position.
 - The retractable nipple (5) is released

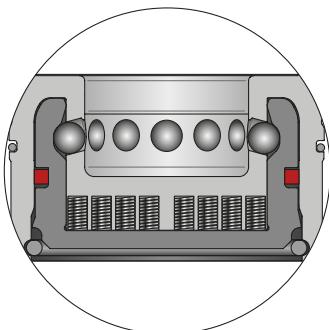

Mechanically clamping:

- The pressure is relieved and drops to 0 bar.
 - The spring pre-load is applied via the piston (2), the piston moves down.
 - The balls (4) are pressed in by the piston (2) and enclose the retractable nipple.
 - The retractable nipple is securely clamped by the spring pre-load.

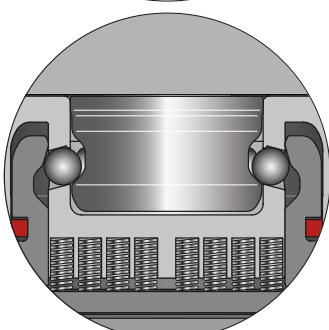

Tried and tested technology with a system –
Original down to the smallest detail

Advantages
that pay off!

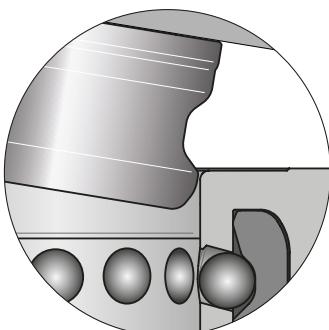

Design

- Compact design with high clamping forces
- Low installation depth
- Modular design
- Simple installation contour
- Easy to clean
- Easy to maintain – straightforward to replace
- Made of high-quality, stainless tool steel
- Can be actuated hydraulically or pneumatically
- Piston seal on inside

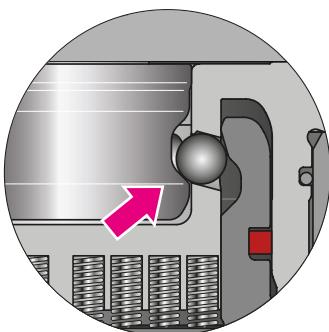

Space-saving, also on pallet side

- The retractable nipple basic can be mounted straightforwardly
- Extremely space-saving installation shape (on the basic S the retractable nipple protrudes only 15.5 mm)
- Easy handling of pallets due to short extraction distances

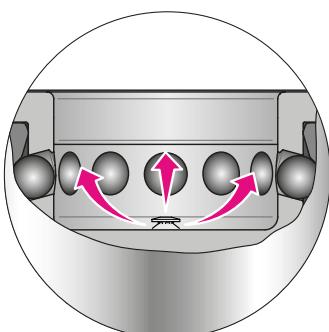

Lifting out/off at an angle

- Workpiece, jig and pallet change without tilting – particularly important with asymmetrical weight distribution on the pallet

Exact position up to the maximum load

- The spring force constantly fixes the retractable nipple positively and precisely
- No bending or lifting off
- Vibrations are damped, the quality of the surfaces to be machined increases and the lives of the tools increase

Intelligent blow-out technology

- Particularly effective cleaning due to the extending nozzle
- Is suitable for partial automation and reduces the cleaning effort

Note:

Spacing tolerance: ±0.01 mm for SPEEDY and retractable nipple

* Fit overpressure safety valve

1) Retention force

The retention force refers to the max. load at which the nipple will continue to be retained.

2) Radial pre-positioning

The loading device must have play in the case of automated handling.

3) Repeatability

Repeatability generally refers to the accuracy with which the same pallet is positioned on changing with the same interface.

Tilting torque calculation example

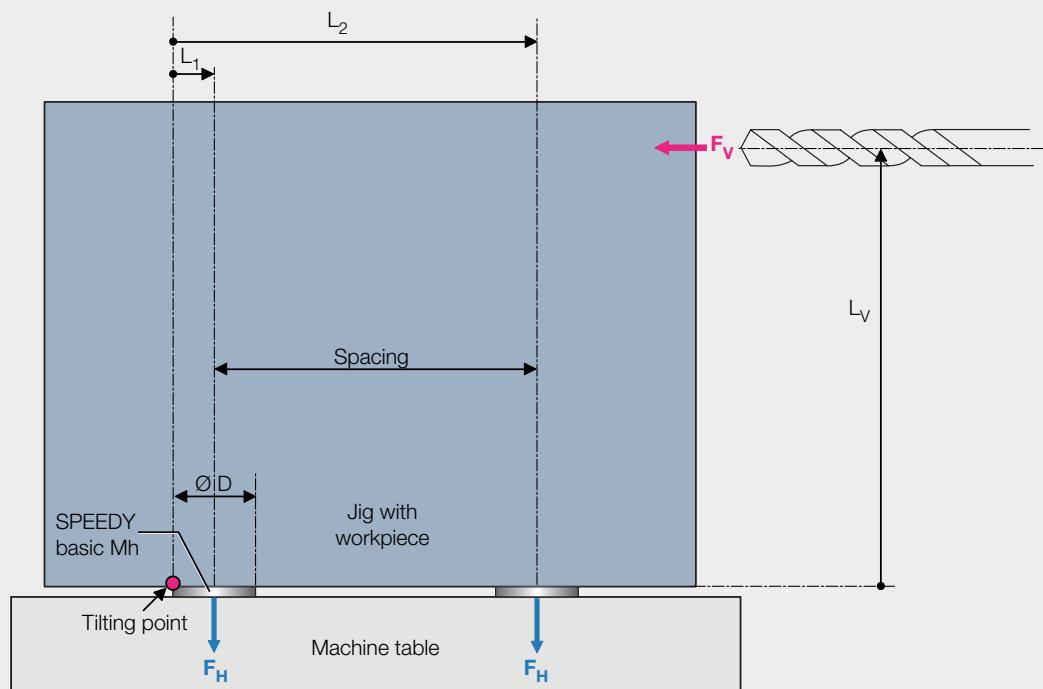

Profit from our expertise

**Example:**

Fast closing clamp plate 4 SPEEDY basic Mh with spacing 200 x 200 and max. feed force of 10 kN with distance of 300 mm.

Question:

Due to the predominance of roughing work, the system is to be checked for a double safety factor. Are the number of fast closing clamps and the spacing selected adequate?

**Solution:**

$$M_H > 2 \times M_V ?$$

$$M_V = F_V \times L_V = 10'000 \text{ N} \times 0,3 \text{ m}$$

$$M_V = 3'000 \text{ Nm}$$

$$M_H = 2 \times (F_H \times L_1) + 2 \times (F_H \times L_2)$$

$$M_H = 2 \times F_H \times (L_1 + L_2)$$

$$L_1 = \frac{\varnothing D}{2}$$

$$L_2 = \frac{\varnothing D}{2} + \text{Spacing} = 0,256 \text{ m}$$

$$L_1 + L_2 = \frac{\varnothing D}{2} + \text{Spacing} = 0,312 \text{ m}$$

$$L_1 + L_2 = 0,112 \text{ m} + 0,20 \text{ m} = 0,312 \text{ m}$$

$$M_H = 2 \times F_H \times (L_1 + L_2) = 2 \times 10'000 \text{ N} \times 0,312 \text{ m}$$

$$M_H = 6'240 \text{ Nm}$$

$$\frac{M_H}{M_V} > 2 ?$$

$$\frac{M_H}{M_V} = 6'240 \text{ Nm} / 3'000 \text{ Nm}$$

$$\frac{M_H}{M_V} = 2,08 > 2$$

With this design there is a safety factor of around two.

(Enter all variables in SI units (metres, newtons))

M_V : Moment from feed force

M_H : Moment from retention force

F_V : Feed force (10'000 N)

F_H : Retention force (30'000 N)

Spacing = 200 mm = 0,20 m

$\varnothing D$ (bearing ring) : 112 mm = 0,112 m

L_V : 300 mm = 0,30 m

**SPEEDY basic Y p**

- Module
- Round
- Pneumatically actuated

**Characteristics:**

Flush Mount fast closing clamp module made of high-quality, stainless tool steel.

Due to the low height, little space is required.

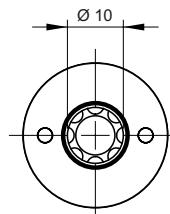

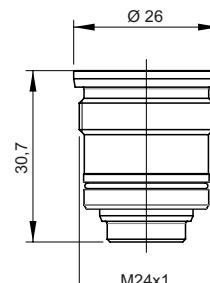

Is clamped mechanically and released pneumatically.

Application:

For flush mounting in machines, machine pallets, plates, angles, cubes, mounting towers and trunnion tables.

Machine element:

Can be used for all common machining tasks such as milling, grinding, eroding as well as on test stands and assembly devices.

SPEEDY basic

**SPEEDY basic S^h**

- Module
- Round
- Hydraulically actuated

**Characteristics:**

Flush Mount fast closing clamp module made of high-quality, stainless tool steel.

Due to the low height, little space is required.

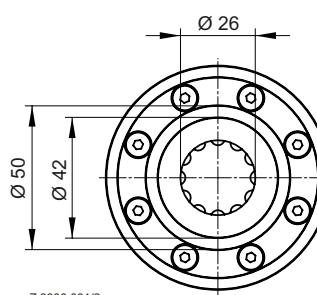

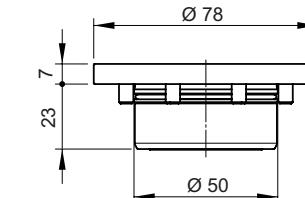

Is clamped mechanically and released hydraulically.

Application:

For flush mounting in machines, machine pallets, plates, angles, cubes, mounting towers and trunnion tables.

Machine element:

Can be used for all common machining tasks such as milling, grinding, eroding as well as on test stands and assembly devices.

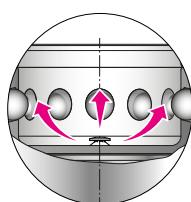

Z 8000 001/2

Order no.	Retention force	Pressure max.	Release pressure	Weight	Data sheet
8000 001	15'000 N	80 bar	20 bar	0.5 kg	D148

Fastening screws included.

SPEEDY basic S^h with blow-out function

- Module
- Round
- Hydraulically actuated
- Blow-out function

**Characteristics:**

Flush Mount fast closing clamp module made of high-quality, stainless tool steel.

Due to the low height, little space is required.

Is clamped mechanically and released hydraulically.

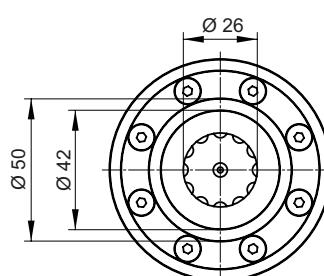

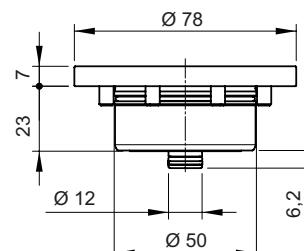

Intelligent blow-out function for cleaning the precision bore. Mount control via differential pressure or blocking air possible.

Application:

For partial automation, reduces the cleaning effort. For flush mounting in machines, machine pallets, plates, angles, cubes, mounting towers and trunnion tables.

Machine element:

Can be used for all common machining tasks such as milling, grinding, eroding as well as on test stands and assembly devices.

Z 8000 003/4

For information on the retractable nipple fastening variants see page 19.

Retractable nipple fastening variants

The fastening variants shown are possible for SPEEDY basic S, M and L.

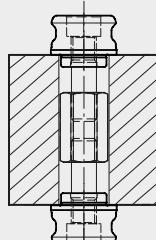

Variant A

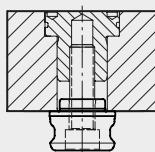

Variant B

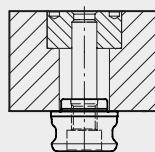

Variant C

Variant D

Variant E

Variant A:

For applications in which nipple bores are not allowed on the surface of the pallet, or for direct workpiece clamping.

Variant B:

Simple nipple fastening from above, if particular accuracy between the position of the nipple and the upper side of the pallet is not necessary.

Variant C:

Ideal fastening variant for clamping arrangements using which the workpiece is machined on both sides. Highest accuracy is ensured because the nipples are fastened in the same mounting bore.

Variant D, E:

These fastening variants are to be preferred. The precision bore for the nipple and all the necessary positioning holes on the pallet can be manufactured in one operation. As a consequence the positions have the highest accuracy in relation to each other.

Nipple fastening D

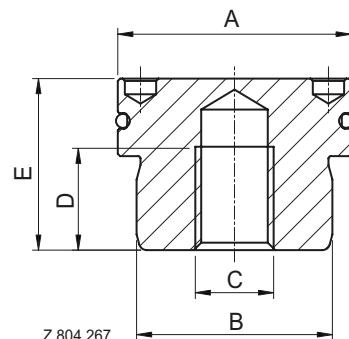

Characteristics:

Makes it possible to manufacture the nipple fastening with one clamping arrangement. In this way the highest accuracy is achieved.

Application:

Machine pallets, machine vices, chucks, jigs, direct workpiece clamping.

Order no.	For retractable nipples	$\varnothing A$	$\varnothing B$	C	D	E	Data sheet
809 127	basic S	24.8	18	M8	12	21.9	D152

- Module
- Round
- Pneumatically actuated
- Blow-out function

Characteristics:

Flush Mount fast closing clamp module made of high-quality, stainless tool steel.

Due to the low height, little space is required.

Is clamped mechanically and released pneumatically.

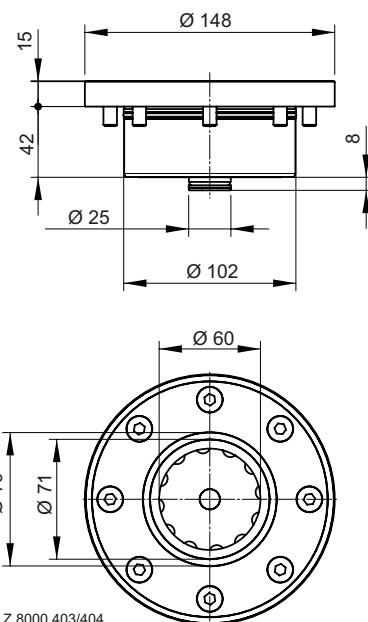

Intelligent blow-out function for cleaning the precision bore. Mount control via differential pressure or blocking air possible.

Application:

For partial automation, reduces the cleaning effort. For flush mounting in machines, machine pallets, plates, angles, cubes, mounting towers and trunnion tables.

Machine element:

Can be used for all common machining tasks such as milling, grinding, eroding as well as on test stands and assembly devices.

Order no.	Retention force	Pressure max.	Release pressure	Weight	Data sheet
8000 404	23'000 N	10 bar	5.5 bar	3.8 kg	D154

Fastening screws included.

For data sheets and 3D data see www.stark-inc.com

Retractable nipple basic L

With zero point

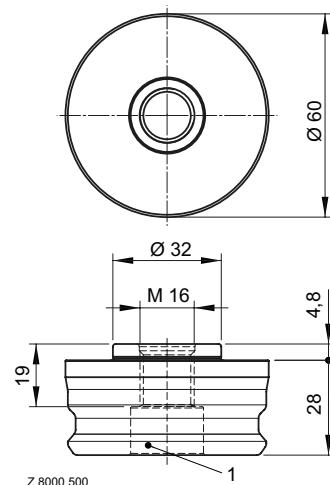

Characteristics:

Retractable nipple with zero point.

Application:

For positioning and clamping on machine pallets, machine vices, chucks, jigs, direct workpiece clamping.

Order no.	Screw quality	Tightening torque M12 M16	Weight	Data sheet
8000 500	M12:12.9 / M16:8.8	140 Nm 200 Nm	0.6 kg	D152

1) Counterbore for screw DIN 912

Retractable nipple basic L

With equaliser

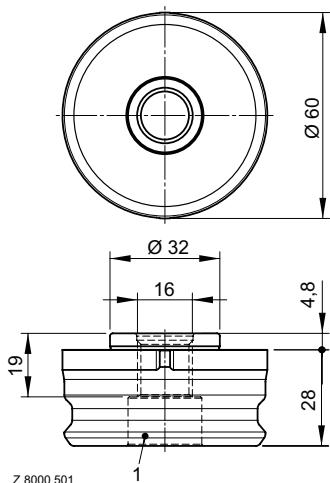

Characteristics:

Retractable nipple with equaliser in one axis (sword shape).

Application:

For positioning and clamping on machine pallets, machine vices, chucks, jigs, direct workpiece clamping.

Order no.	Screw quality	Tightening torque M12 M16	Weight	Data sheet
8000 501	M12:12.9 / M16:8.8	140 Nm 200 Nm	0.6 kg	D152

1) Counterbore for screw DIN 912

Retractable nipple basic L

Without centring

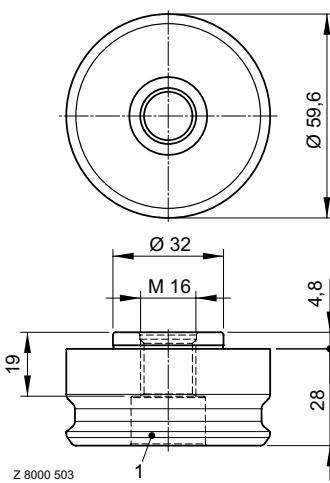

Characteristics:

Retractable nipple without centring.

Application:

For positioning and clamping on machine pallets, machine vices, chucks, jigs, direct workpiece clamping.

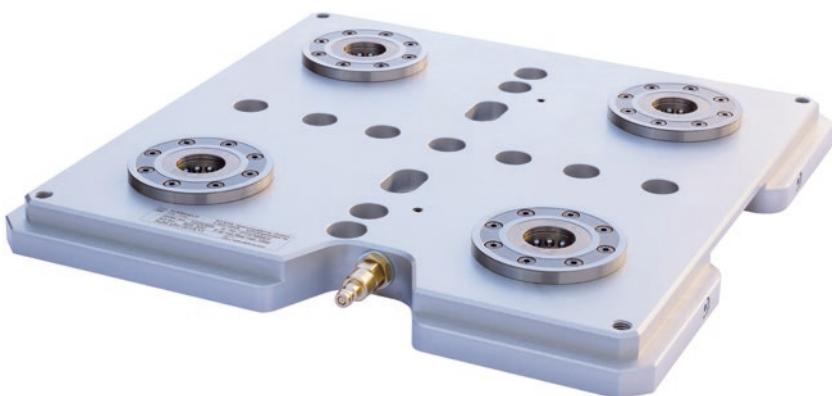

Order no.	Screw quality	Tightening torque M12 M16	Weight	Data sheet
8000 502	M12:12.9 / M16:8.8	140 Nm 200 Nm	0.6 kg	D152

1) Counterbore for screw DIN 912

For information on the retractable nipple fastening variants see page 19.

Fast closing clamp plate SPEEDY basic S/M P

Characteristics:

Fast closing clamp plate made of anodised aluminium with 4 SPEEDY basic. The pallet is clamped mechanically and released pneumatically. Fastening holes, clamping edge, positioning holes and an alignment surface make placing in operation straightforward on many common machines.

Fast closing clamp plate SPEEDY basic Sp

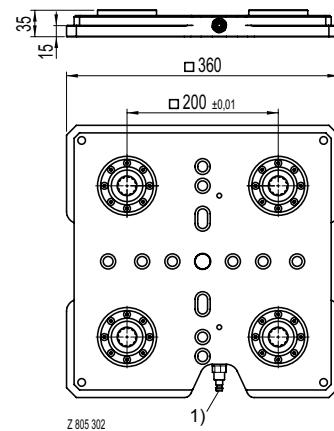

Application:

- On 3/4/5-axis machines for all common machining tasks such as milling, grinding, eroding.

Order no.	Description	Dimensions (mm)	Weight
805 302	Set SVP SPEEDY basic Sp	360 x 360 x 35	9.8 kg
805 305	Pallet with retractable nipples basic S	360 x 360 x 28	9.6 kg
805 202	Fixing clamp for basic S	40X40X23 / M12	0.01 kg

805 202

805 302

1) Coupling 5000 301

Fast closing clamp plate SPEEDY basic Mp

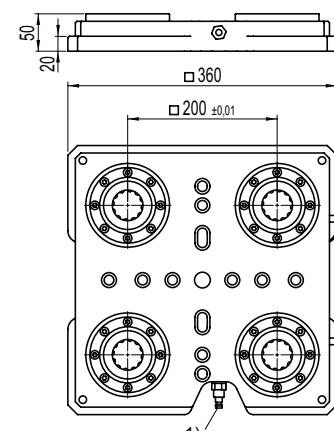

Application:

- On 3/4/5-axis machines for all common machining tasks such as milling, grinding, eroding.

Order no.	Description	Dimensions (mm)	Weight
805 300	Set SVP SPEEDY basic Mp	360 x 360 x 50	13.8 kg
805 304	Pallet with retractable nipples basic M	360 x 360 x 28	10.2 kg
805 201	Fixing clamp for basic M	40X40X28 / M12	0.01 kg

805 201

805 300

1) Coupling 5000 301

For data sheets and 3D data see www.stark-inc.com

Fast closing clamp plate SPEEDY basic S/M

Characteristics:

Fast closing clamp plate made of anodised aluminium with 4 SPEEDY basic. The pallet is clamped mechanically and released hydraulically. Fastening holes, clamping edge, positioning holes and an alignment surface make placing in operation straightforward on many common machines.

Fast closing clamp plate SPEEDY basic S

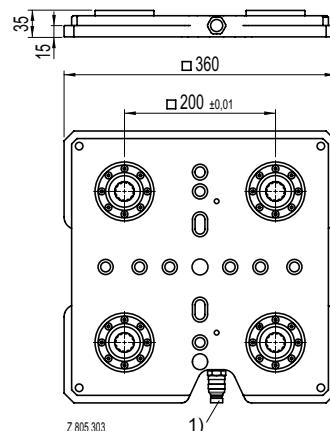

Application:

- On 3/4/5-axis machines for all common machining tasks such as milling, grinding, eroding.

Order no.	Description	Dimensions (mm)	Weight
805 303	Set SVP SPEEDY basic Sh	360 x 360 x 35	9.8 kg
805 305	Pallet with retractable nipples basic S	360 x 360 x 28	9.6 kg
805 202	Fixing clamp for basic S	40x40x23 / M12	0.01 kg

805 202

805 303

- 1) Coupling 952 126: use self-sealing coupling 952 177 on hose

Fast closing clamp plate SPEEDY basic M

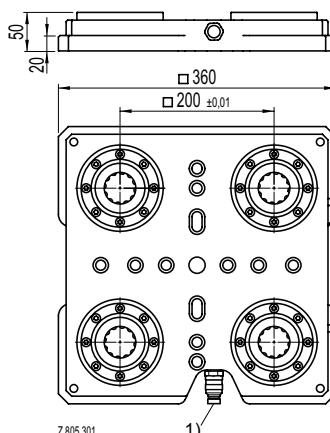

Application:

- On 3/4/5-axis machines for all common machining tasks such as milling, grinding, eroding.

Order no.	Description	Dimensions (mm)	Weight
805 301	Set SVP SPEEDY basic Mh	360 x 360 x 50	13.8 kg
805 304	Pallet with retractable nipples basic M	360 x 360 x 28	10.2 kg
805 201	Fixing clamp for basic M	40x40x28 / M12	0.01 kg

805 201

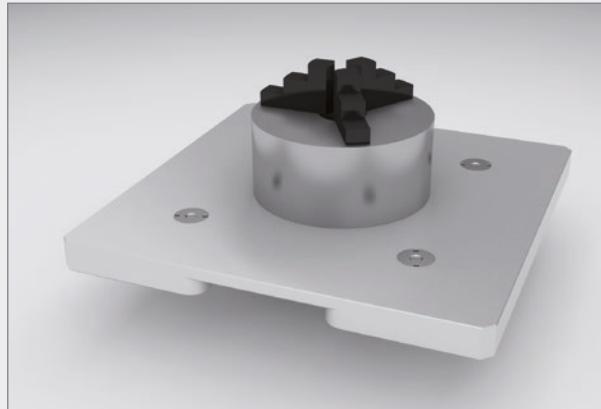

805 301

- 1) Coupling 952 126: use self-sealing coupling 952 177 on hose

Possible applications

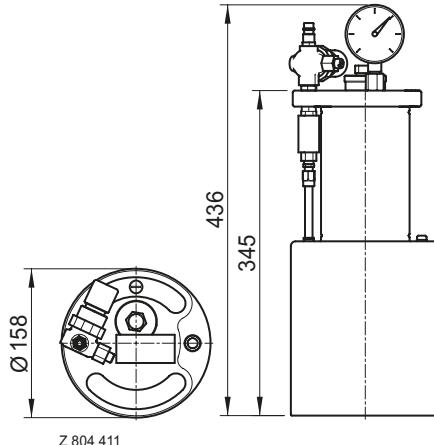

Pallets with retractable nipples are available in different versions complete with means of clamping the work-piece. Please request information from your STARK sales partner.

**Accessory****Pressure booster RECORD h****Characteristics:**

The pressure booster RECORD converts air pressure to the hydraulic system pressure required to operate the SPEEDYs.

Application:

Operation of:
50 SPEEDY basic S
20 SPEEDY basic M
10 SPEEDY basic L

Order no.	System pressure	Air pressure	Oil capacity	Weight
804 411	40 bar	6 bar	0.31 l	8.80 kg

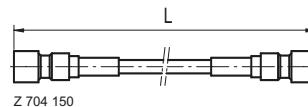

Hydraulic connection via hydraulic coupler 804 371 (use coupling 952 044 on hose), hydraulic hose not included.

Hydraulic hose with couplings h**Characteristics:**

Hydraulic hose with hydraulic couplers at both ends (952 044 and 952 177 self-sealing).

Application:

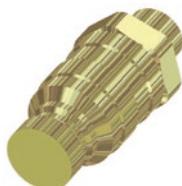

Is used to connect between pressure booster and fast closing clamp plate or SPEEDY basic.

Order no.	L	Max. pressure	Weight
704 151	1.5 m	300 bar	0.60 kg
704 153	3.0 m	300 bar	1.20 kg

Self-sealing coupler h

- SPEEDY side
- Self-sealing

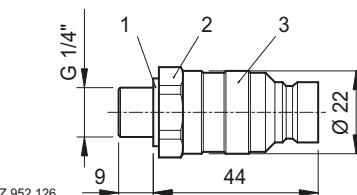

**Characteristics:**

Coupling for fast closing clamp plates or connection block to the pipework for the SPEEDY basic fast closing clamps.

Application:

Particularly recommendable for use in conjunction with pressure boosters (it is not necessary to top-up the pressure booster).

Can be used wherever oil is not allowed to leak into the drilling emulsion and for frequent coupling processes.

- 1) Sealing ring
- 2) AF 22
- 3) Coupling

Order no.	Connection	Pressure	Weight
952 126	Hydraulic coupler	300 bar	0.05 kg

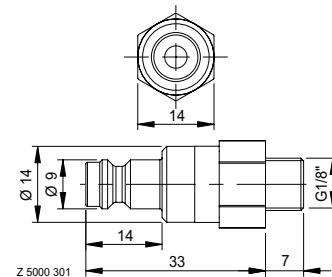

Coupling nipple

Characteristics:

Coupling nipple for SPEEDY basic in conjunction with the coupling 5000 300 or 954 208.

Application:

For the connection and actuation of the fast closing clamps.

Order no.	Connection	Weight
5000 301	G1/8"	0.05 kg

Slide coupling

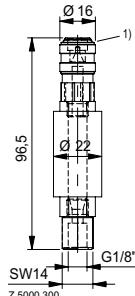

- Switchable

Characteristics:

Pneumatic coupling unit with slide valve for SPEEDY basic.

Application:

Actuation of the fast closing clamps SPEEDY basic.

Order no.	Connection	Weight
5000 300	G1/8"	0.20 kg

1) Coupling 954 208 suitable for coupling nipple 5000 301.

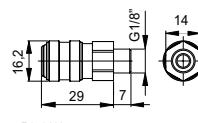

Coupling

Characteristics:

Pneumatic coupling, suitable for 5000 301.

Application:

Actuation of the fast closing clamps SPEEDY basic.

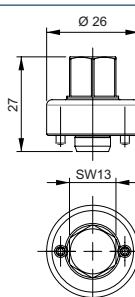

Order no.	Connection	Weight
954 208	G1/8"	0.05 kg

Retractable nipple key SPEEDY basic Y

Characteristics:

Retractable nipple key for the secure installation of SPEEDY basic Y.

Order no.	Across flats	Tightening torque	Weight
8000 899	SW13	15 Nm	0,05 kg

For data sheets and 3D data see www.stark-inc.com

SPEEDY basic

... weil Nullpunktspannen einen Ursprung hat!

Erfahrung

Seit 1988 entwickelt STARK Nullpunkt Spannsysteme und gilt als Pionier auf diesem Gebiet.

Im ersten Katalog beschrieben wie folgt:

„Der Einzugsnippel wird an der Spannvorrichtung oder direkt ans Werkstück montiert.“

Schon bei der Einführung wurden Möglichkeiten bedacht, die teilweise Jahre später realisiert wurden. Der Ur-Spannzylinder wird heute noch in der Produktion eingesetzt.

Spezialist

Als führendes Unternehmen der Nullpunkt Spanntechnik hat sich STARK kompromisslos auf die Nullpunkt Technologie spezialisiert. Durch die Ausbildung von Fachkräften sichert STARK Know-how für die Zukunft.

STARK vereint alle Kernkompetenzen unter einem Dach.

Laufende Entwicklung und Patente zeugen von der enormen Innovationskraft des Unternehmens.

Qualität, Präzision, Service und individuelle Beratung sind Bestandteil der Unternehmensstrategie.

Partner

In der Produktion sieht STARK sich als Partner für verschiedene Branchen und Anwendungen.

Für Automobil- oder Flugzeugbranche, Maschinenbau sowie Einzel- oder Serienfertigung steht STARK als kompetenter Ansprechpartner zur Verfügung.

Individuelle Beratung für den Einsatz der STARK Komponenten und maßgeschneiderte Lösungen für die Produktion sind unsere Stärken.

Gruppe

ROEMHELD, HILMA, STARK – die drei Marken der Römhled-Gruppe zählen weltweit zu den Marktführern für produktive Lösungen in der industriellen Fertigungs-, Montage-, Spann- und Antriebstechnik.

Mit unseren Komponenten, Produkten und Systemen gestalten wir Ihre Fertigung effizienter und flexibler. Die Römhled-Gruppe ist international mit Vertriebspartnern und Joint Ventures vor Ort vertreten.
